

1. Write a Java program to read a text file and count: • Number of lines • Number of words • Number of characters

2. **Append Data to File** Write a program to: • Take user input • Append that data into an existing file without deleting previous content.

3. Buffered Reader Usage Write a Java program to read a file using BufferedReader and print only those lines that contain the word "Java".

The screenshot shows the Eclipse IDE with the following components:

- Package Explorer:** Displays the project structure with folders for Day 1 through Day 10 assignments, Selenium, and Wipro Training.
- Editor:** Contains the `FilterJavaLines.java` file. The code is as follows:

```
1 package assignments;
2
3 import java.io.BufferedReader;
4 import java.io.FileReader;
5 import java.io.IOException;
6
7 public class FilterJavaLines {
8     public static void main(String[] args) {
9         String targetWord = "Java";
10
11         try (BufferedReader br = new BufferedReader(new FileReader("input.txt"))) {
12             String line;
13             System.out.println("Lines containing '" + targetWord + "':");
14
15             while ((line = br.readLine()) != null) {
16                 if (line.contains(targetWord)) {
17                     System.out.println(line);
18                 }
19             }
20         } catch (IOException e) {
21             System.out.println("File error: " + e.getMessage());
22         }
23     }
24 }
```
- Console:** Shows the output of the program:

```
<terminated> FilterJavaLines [Java Application] C:\Program Files\Java\jdk-26.0.1\bin\javaw.exe (5 May 2026, 10:49:55 am - 10:49:55 am elapsed 0:00:00) [pid: 7320]
Lines containing 'Java':
This is Java
Hello Everyone, i am doing a Java assignment.
```

4. Count Specific Word in File Write a program to count how many times a specific word (e.g., "Java") appears in a file.

The screenshot shows the Eclipse IDE with the following components:

- Package Explorer:** Displays the project structure, with the `WordFrequency.java` file selected under the `assignments` folder.
- Editor:** Contains the `WordFrequency.java` file. The code is as follows:

```
1 package assignments;
2
3 import java.io.BufferedReader;
4 import java.io.FileReader;
5 import java.io.IOException;
6
7 public class WordFrequency {
8     public static void main(String[] args) {
9         String searchWord = "Java";
10         int count = 0;
11
12         try (BufferedReader br = new BufferedReader(new FileReader("input.txt"))) {
13             String line;
14             while ((line = br.readLine()) != null) {
15                 String[] words = line.split("\\s+");
16                 for (String word : words) {
17                     // Remove punctuation like commas or periods for better matching
18                     String cleanedWord = word.replaceAll("[^a-zA-Z]", "");
19                     if (cleanedWord.equalsIgnoreCase(searchWord)) {
20                         count++;
21                     }
22                 }
23             }
24             System.out.println("The word '" + searchWord + "' appears " + count + " times.");
25         } catch (IOException e) {
26             System.out.println("Error: " + e.getMessage());
27         }
28     }
29 }
```
- Console:** Shows the output of the program:

```
<terminated> WordFrequency [Java Application] C:\Program Files\Java\jdk-26.0.1\bin\javaw.exe (5 May 2026, 10:36:38 am - 10:36:38 am elapsed 0:00:00) [pid: 14944]
The word 'Java' appears 2 times.
```
