

# QA DEFECT REPORT

## Tira Beauty App & Amazon App

|                 |                                   |
|-----------------|-----------------------------------|
| Report Date     | May 15, 2026                      |
| Report Version  | v1.0                              |
| Prepared By     | QA Team                           |
| Testing Type    | Functional / Regression / Payment |
| Defect Severity | Major (All)                       |
| Defect Priority | High (All)                        |

### Report Scope

This document details 7 major-severity, high-priority defects identified in the Tira Beauty mobile application and 6 major-severity, high-priority defects found in the Amazon mobile application. All defects were found during functional, regression, and payment testing cycles and require immediate attention prior to production release.

SECTION 1 — TIRA BEAUTY APP

| Tira Beauty App — Defect Report Summary |                           |
|-----------------------------------------|---------------------------|
| Total Defects Reported                  | Severity Level            |
| 7 Defects                               | All Major / High Priority |

1.1 Defect Summary Table

| Defect ID | Title & Module                                                                                    | Environment / Build                                  | Severity | Priority | Repro Rate | Impact                                                                                |
|-----------|---------------------------------------------------------------------------------------------------|------------------------------------------------------|----------|----------|------------|---------------------------------------------------------------------------------------|
| TIRA-001  | <b>OTP Not Received During Login / Registration</b><br><i>Module: Authentication</i>              | Android 13 / iOS 16<br>Build: v3.2.1                 | Major    | High     | 100%       | Users cannot log in or register, completely blocking access to the app.               |
| TIRA-002  | <b>Payment Gateway Crashes on UPI Transaction</b><br><i>Module: Checkout / Payment</i>            | Android 12, App v3.2.1<br>Build: v3.2.1              | Major    | High     | 85%        | Critical financial loss risk; users may be charged without order confirmation.        |

| TIRA-004  | <b>Incorrect Discount Applied at Checkout</b><br><i>Module: Cart / Pricing Engine</i>             | Android & iOS – All tested versions<br>Build: v3.2.1 | Major    | High     | 75%        | Revenue integrity issue and consumer trust violation; legal/compliance risk.          |
| TIRA-005  | <b>Product Images Fail to Load on PDP (Product Detail Page)</b><br><i>Module: Product Listing</i> | Android 13 / iOS 16 (WiFi & 4G)<br>Build: v3.2.1     | Major    | High     | 70%        | Directly reduces purchase intent; customers cannot view product before buying.        |
| TIRA-006  | <b>Order Tracking Status Stuck on 'Pending' After Dispatch</b><br><i>Module: Order Management</i> | Android & iOS<br>Build: v3.2.1                       | Major    | High     | 80%        | High customer anxiety, increased support load, and negative post-purchase experience. |
| TIRA-007  | <b>Search Filters Unresponsive — Results Not Filtered</b><br><i>Module: Search &amp; Filter</i>   | Android 12 & 13 / iOS 15<br>Build: v3.2.1            | Major    | High     | 95%        | Severely hampers product discoverability, leading to user drop-off and lost revenue.  |

1.2 Detailed Defect Reports

| TIRA-001 — OTP Not Received During Login / Registration |                     |
|---------------------------------------------------------|---------------------|
| Module                                                  | Authentication      |
| Environment                                             | Android 13 / iOS 16 |
| Build Version                                           | v3.2.1              |
| Severity                                                | Major               |

|                    |                                                                                                      |
|--------------------|------------------------------------------------------------------------------------------------------|
| Priority           | High                                                                                                 |
| Reproducibility    | 100%                                                                                                 |
| Steps to Reproduce | 1. Open Tira app 2. Tap 'Sign In' 3. Enter valid mobile number 4. Tap 'Send OTP' 5. Wait for OTP SMS |
| Expected Result    | OTP SMS received within 30 seconds on the registered mobile number.                                  |
| Actual Result      | OTP is not delivered even after 3–5 minutes; resend option also fails to trigger delivery.           |
| Business Impact    | Users cannot log in or register, completely blocking access to the app.                              |

**TIRA-002 — Payment Gateway Crashes on UPI Transaction**

|                    |                                                                                                               |
|--------------------|---------------------------------------------------------------------------------------------------------------|
| Module             | Checkout / Payment                                                                                            |
| Environment        | Android 12, App v3.2.1                                                                                        |
| Build Version      | v3.2.1                                                                                                        |
| Severity           | Major                                                                                                         |
| Priority           | High                                                                                                          |
| Reproducibility    | 85%                                                                                                           |
| Steps to Reproduce | 1. Add item to cart 2. Proceed to checkout 3. Select 'UPI' as payment method 4. Enter UPI ID 5. Tap 'Pay Now' |
| Expected Result    | Payment processed successfully; order confirmation screen displayed.                                          |
| Actual Result      | App crashes immediately after tapping 'Pay Now'; order not placed, yet amount debited in some cases.          |
| Business Impact    | Critical financial loss risk; users may be charged without order confirmation.                                |

**TIRA-003 — Wishlist Items Disappear After App Restart**

|                    |                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------|
| Module             | Wishlist                                                                                                               |
| Environment        | Android 11 & 13 / iOS 15                                                                                               |
| Build Version      | v3.2.1                                                                                                                 |
| Severity           | Major                                                                                                                  |
| Priority           | High                                                                                                                   |
| Reproducibility    | 90%                                                                                                                    |
| Steps to Reproduce | 1. Log in 2. Browse products 3. Add 3–5 products to Wishlist 4. Force-close the app 5. Reopen and navigate to Wishlist |
| Expected Result    | All wishlisted items persist after app restart (saved to account server-side).                                         |
| Actual Result      | Wishlist is completely empty after restart; all saved items are lost.                                                  |
| Business Impact    | Poor user experience; loss of saved preferences, reducing purchase conversion.                                         |

**TIRA-004 — Incorrect Discount Applied at Checkout**

|                    |                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------|
| Module             | Cart / Pricing Engine                                                                                                     |
| Environment        | Android & iOS – All tested versions                                                                                       |
| Build Version      | v3.2.1                                                                                                                    |
| Severity           | Major                                                                                                                     |
| Priority           | High                                                                                                                      |
| Reproducibility    | 75%                                                                                                                       |
| Steps to Reproduce | 1. Add product with 30% discount tag 2. Apply valid promo code 3. Review order summary at checkout                        |
| Expected Result    | Promo code discount stacks correctly with product offer; final price mathematically accurate.                             |
| Actual Result      | Final price is higher than expected; promo discount is applied before the product discount causing incorrect calculation. |
| Business Impact    | Revenue integrity issue and consumer trust violation; legal/compliance risk.                                              |

**TIRA-005 — Product Images Fail to Load on PDP (Product Detail Page)**

|                    |                                                                                                               |
|--------------------|---------------------------------------------------------------------------------------------------------------|
| Module             | Product Listing                                                                                               |
| Environment        | Android 13 / iOS 16 (WiFi & 4G)                                                                               |
| Build Version      | v3.2.1                                                                                                        |
| Severity           | Major                                                                                                         |
| Priority           | High                                                                                                          |
| Reproducibility    | 70%                                                                                                           |
| Steps to Reproduce | 1. Open app 2. Search any product (e.g., 'MAC Foundation') 3. Tap on product 4. Scroll through image carousel |
| Expected Result    | All product images load within 2–3 seconds.                                                                   |
| Actual Result      | Images show broken icons or blank placeholders; only 1 out of 5 images loads intermittently.                  |
| Business Impact    | Directly reduces purchase intent; customers cannot view product before buying.                                |

**TIRA-006 — Order Tracking Status Stuck on 'Pending' After Dispatch**

|                 |                  |
|-----------------|------------------|
| Module          | Order Management |
| Environment     | Android & iOS    |
| Build Version   | v3.2.1           |
| Severity        | Major            |
| Priority        | High             |
| Reproducibility | 80%              |

|                           |                                                                                                                                   |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>Steps to Reproduce</b> | 1. Place order 2. Receive dispatch confirmation email 3. Open app → My Orders 4. Tap on dispatched order 5. Check tracking status |
| <b>Expected Result</b>    | Tracking status updates to 'Shipped' with courier details and live tracking link.                                                 |
| <b>Actual Result</b>      | Status remains 'Pending' indefinitely; no tracking number shown; creates confusion and support calls.                             |
| <b>Business Impact</b>    | High customer anxiety, increased support load, and negative post-purchase experience.                                             |

**TIRA-007 — Search Filters Unresponsive — Results Not Filtered**

|                           |                                                                                                             |
|---------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Module</b>             | Search & Filter                                                                                             |
| <b>Environment</b>        | Android 12 & 13 / iOS 15                                                                                    |
| <b>Build Version</b>      | v3.2.1                                                                                                      |
| <b>Severity</b>           | Major                                                                                                       |
| <b>Priority</b>           | High                                                                                                        |
| <b>Reproducibility</b>    | 95%                                                                                                         |
| <b>Steps to Reproduce</b> | 1. Tap search bar 2. Enter 'Lipstick' 3. Tap Filter 4. Select Brand: 'NARS', Price: '500–1500' 5. Tap Apply |
| <b>Expected Result</b>    | Search results display only NARS lipsticks within ₹500–₹1500 range.                                         |
| <b>Actual Result</b>      | All original unfiltered results are shown; filter selections are ignored entirely.                          |
| <b>Business Impact</b>    | Severely hampers product discoverability, leading to user drop-off and lost revenue.                        |

| AMZN-005  | <b>Deals / Lightning Deals Price Not Reflected in Cart</b><br><i>Module: Cart / Deals Pricing</i>             | Android & iOS — All versions<br>Build: App v26.18.0       | Major    | High     | 85%        | Revenue manipulation perception; users abandon cart when noticing inflated price.       |
| AMZN-006  | <b>Push Notifications for Order Updates Not Delivered</b><br><i>Module: Notifications</i>                     | Android 12 & 13<br>Build: App v26.18.0                    | Major    | High     | 80%        | Users miss delivery windows; missed deliveries lead to RTO and repeat delivery costs.   |

2.2 Detailed Defect Reports

| AMZN-001 — One-Click Order Placed Without Address Confirmation |                         |
|----------------------------------------------------------------|-------------------------|
| Module                                                         | Buy Now / 1-Click Order |
| Environment                                                    | Android 13 / iOS 16     |
| Build Version                                                  | App v26.18.0            |
| Severity                                                       | Major                   |
| Priority                                                       | High                    |

|                           |                                                                                           |
|---------------------------|-------------------------------------------------------------------------------------------|
| <b>Reproducibility</b>    | 80%                                                                                       |
| <b>Steps to Reproduce</b> | 1. Log in 2. Open any product page 3. Tap 'Buy Now' 4. Observe the checkout flow          |
| <b>Expected Result</b>    | App prompts user to confirm delivery address and payment before placing order.            |
| <b>Actual Result</b>      | Order is placed immediately to a stale/old default address without any confirmation step. |
| <b>Business Impact</b>    | Orders delivered to wrong addresses; financial loss and major customer dissatisfaction.   |

#### AMZN-002 — Saved Cards Disappear from Wallet After App Update

|                           |                                                                                                                                       |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Module</b>             | Payments / Wallet                                                                                                                     |
| <b>Environment</b>        | Android 12 & 13                                                                                                                       |
| <b>Build Version</b>      | Post v26.17.0 → v26.18.0 update                                                                                                       |
| <b>Severity</b>           | Major                                                                                                                                 |
| <b>Priority</b>           | High                                                                                                                                  |
| <b>Reproducibility</b>    | 65%                                                                                                                                   |
| <b>Steps to Reproduce</b> | 1. Save 2 credit cards in Amazon Pay wallet 2. Update app from v26.17.0 to v26.18.0 3. Open app → Account → Amazon Pay → Manage Cards |
| <b>Expected Result</b>    | All previously saved cards are available post-update.                                                                                 |
| <b>Actual Result</b>      | Saved cards are completely removed; user must re-enter card details.                                                                  |
| <b>Business Impact</b>    | Broken checkout experience; loss of user trust in storing payment info.                                                               |

#### AMZN-003 — Prime Video Freezes and Crashes Mid-Stream

|                           |                                                                                                                                                  |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Module</b>             | Prime Video (In-App)                                                                                                                             |
| <b>Environment</b>        | Android 11, 12, 13                                                                                                                               |
| <b>Build Version</b>      | App v26.18.0                                                                                                                                     |
| <b>Severity</b>           | Major                                                                                                                                            |
| <b>Priority</b>           | High                                                                                                                                             |
| <b>Reproducibility</b>    | 70%                                                                                                                                              |
| <b>Steps to Reproduce</b> | 1. Log in with Prime account 2. Open Prime Video 3. Play any movie/series 4. Watch for 5–10 minutes 5. Observe during scene changes or HD buffer |
| <b>Expected Result</b>    | Seamless playback with adaptive streaming.                                                                                                       |
| <b>Actual Result</b>      | Video freezes, audio continues for 2–3 seconds, then app crashes to home screen.                                                                 |
| <b>Business Impact</b>    | Core paid feature unusable; directly affects Prime subscriber retention.                                                                         |

**AMZN-004 — Return Request Fails — 'Unexpected Error' on Eligible Products**

|                           |                                                                                                                                                 |

| <b>Reproducibility</b>    | 85%                                                                                                              |
| <b>Steps to Reproduce</b> | 1. Open active Lightning Deal with 40% discount 2. Claim deal and add to cart 3. Open cart 4. Review price shown |
| <b>Expected Result</b>    | Cart reflects discounted Lightning Deal price.                                                                   |
| <b>Actual Result</b>      | Cart shows original MRP without the deal discount; discount only appears after payment re-selection.             |
| <b>Business Impact</b>    | Revenue manipulation perception; users abandon cart when noticing inflated price.                                |

**AMZN-006 — Push Notifications for Order Updates Not Delivered**

|                           |                                                                                                                            |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Module</b>             | Notifications                                                                                                              |
| <b>Environment</b>        | Android 12 & 13                                                                                                            |
| <b>Build Version</b>      | App v26.18.0                                                                                                               |
| <b>Severity</b>           | Major                                                                                                                      |
| <b>Priority</b>           | High                                                                                                                       |
| <b>Reproducibility</b>    | 80%                                                                                                                        |
| <b>Steps to Reproduce</b> | 1. Allow notification permissions 2. Place an order 3. Wait for dispatch/delivery notifications 4. Check notification tray |

|                        |                                                                                                    |
|------------------------|----------------------------------------------------------------------------------------------------|
| <b>Expected Result</b> | Real-time push notifications for 'Order Dispatched', 'Out for Delivery', 'Delivered'.              |
| <b>Actual Result</b>   | No push notifications received at any stage; notifications only appear after manually opening app. |
| <b>Business Impact</b> | Users miss delivery windows; missed deliveries lead to RTO and repeat delivery costs.              |
